

# SKYVVA Integration Agent

Version 1.46 - Release

Check out the following summary of new features and bug fixes we have added into our new Agent 1.46 Release.

June 2017

New features and bugs fixed in the current version are as shown in the following:

### NEW/UPDATE FEATURES

- Call stored procedure from agent
- IChained with Integration Agent
- Integrate Files without header with the agent
- SFTP SSH-Authentication instead of user and Password
- Add new property to adapter File - lock file after process
- Scheduler base on interface level
- Change jCrontab to Quartz

### BUG FIXES

- Overlapping Running of Agent
- Agent Installation File  
SKYVVA integration agent limit: Integration Files size limit in Agent  
-> Salesforce attachment limit
- The field " Last Run Date" doesn't display the correct date
- 1.45 Agent Installation File
- Bulk API is not alert with Initialize query
- New Customer Requirement : FTP adapter File Name field , deletion of .lock In the file extension
- File filter.tmp cache wrong interfaces
- Interface will not run in Integration Scheduled if it has its own schedule
- Use Client-Authentication instead of user and Password (SFTP & SSH-Authentication)
- Sync not working
- Chooses some integration at the level of 'integration properties setup'
- Summary of Agent FTP/SFTP/Outbound Issues
- Automatic switch which API to use for Agent -> SFDC
- IChained with Agent
- Set package size on interface level for Agent processing
- File for attachment is locked after processing failed
- Update log4j library to log4j2 for log file base on size 1MB
- Delete and backup files not work with Bulk mode after Scheduler
